

Dolphin AS selected MARIS Dual ECDIS with official ENC's

“Dolphin is one of the pioneers in the Norwegian oil industry. Since the company was established in 1965 it has acquired a broad and deep experience in the operation of drilling units on the Norwegian Continental Shelf.

Dolphin selected MARIS Dual ECDIS with use of official ENC's for their three 4th generation semisubmersibles drilling units in operation, Borgland Dolphin, Bideford Dolphin and Bredford Dolphin.

Rune Trondsen, Marine Superintendent states that the decision to implement MARIS Dual ECDIS was taken to improve safe navigation with official ENC's.
